

Software for hydraulic devices tests

AQ2TB-STATICAUT

Software for performing static pressure tests and burst tests on hydraulic devices.

The software allows to evaluate the tightness of the device under test when subjected to static pressure according to the conditions established by the main international Standards; it also allows to evaluate the maximum pressure that can reach the device before the burst.

It is possible to customize each test by setting the main parameters of execution:

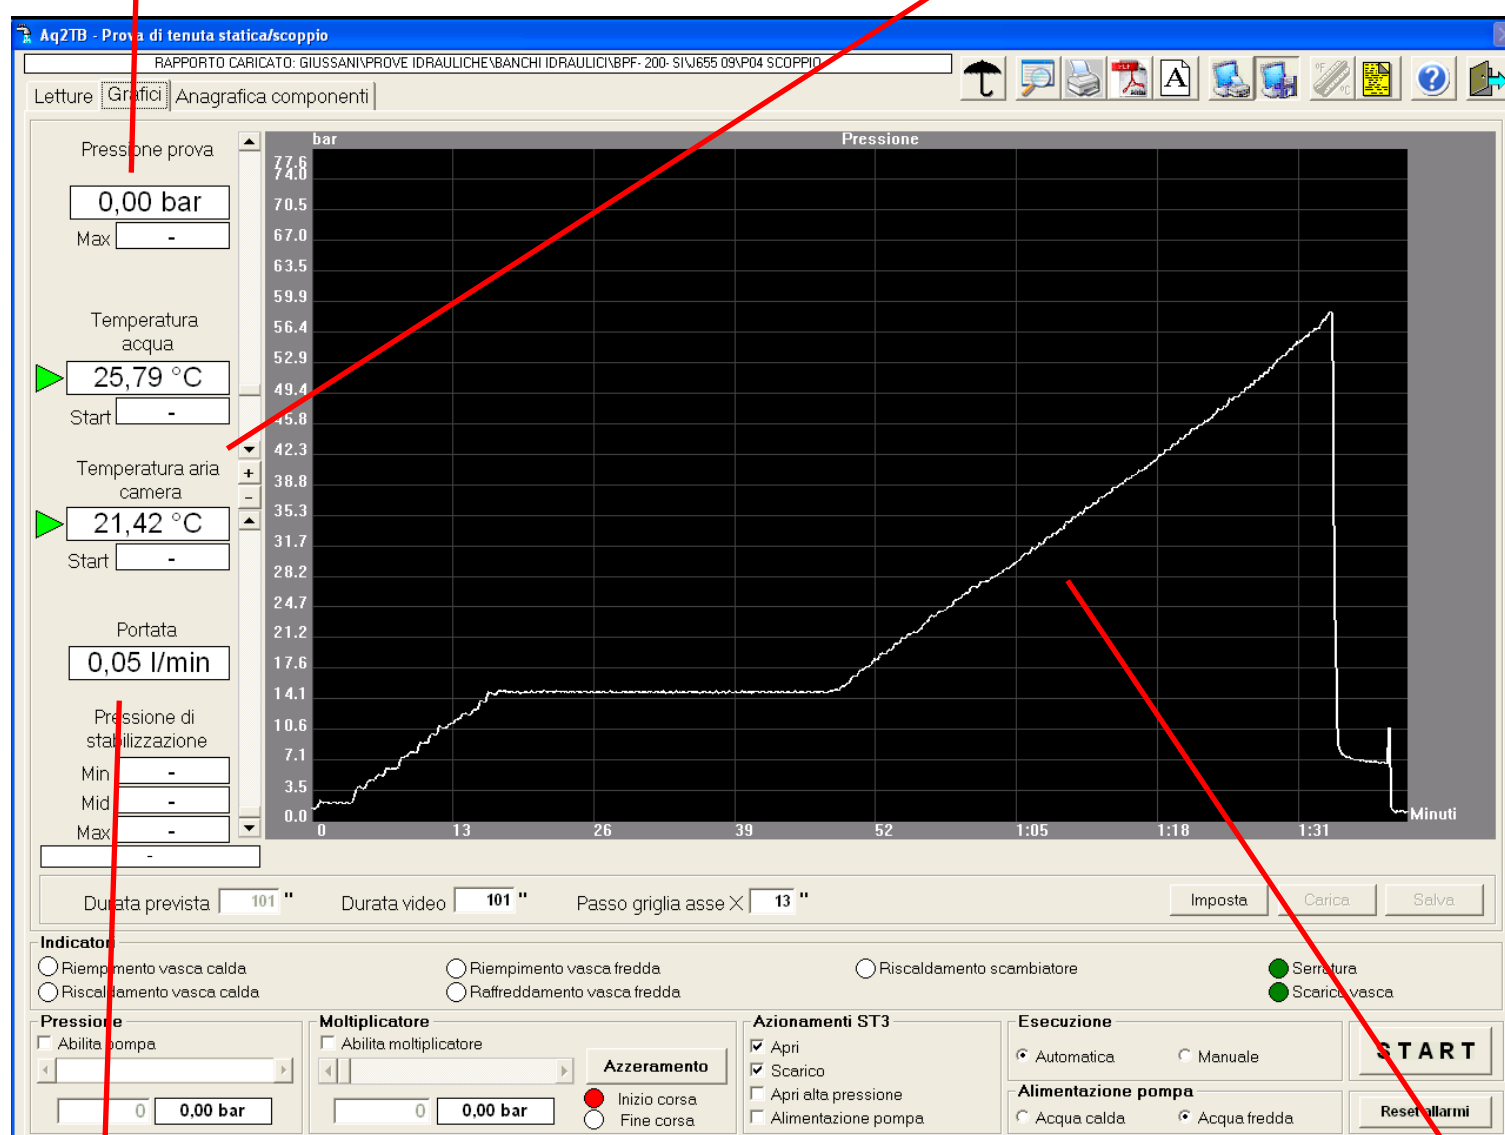

- initial pressure slope (executable by hydraulic pump);
- time and pressure of stabilization;
- final pressure slope.

The setting of the final pressure slope is used to establish the type of test to execute: setting a negative value, the pressure drop to the initial value (**static test**); setting a positive value, the pressure increases until the burst of the component under test (**burst test**). For test benches equipped with climatic chamber and/or hot water supply tank, it is possible to set the temperature range of chamber and hot water within which allow the start of the test.

At last, setting the limits of interruption properly, the software evaluates the burst of the hydraulic device automatically and stops the test.

Final pressure slope: setting a positive value, the pressure increases until the burst of the component under test (**burst test**); setting a negative value, the pressure drop to the initial value (**static test**).

SETTING OF PRESSURE SLOPE AND STABILIZATION PRESSURE

SETTING OF TEST INTERRUPTION LIMITS

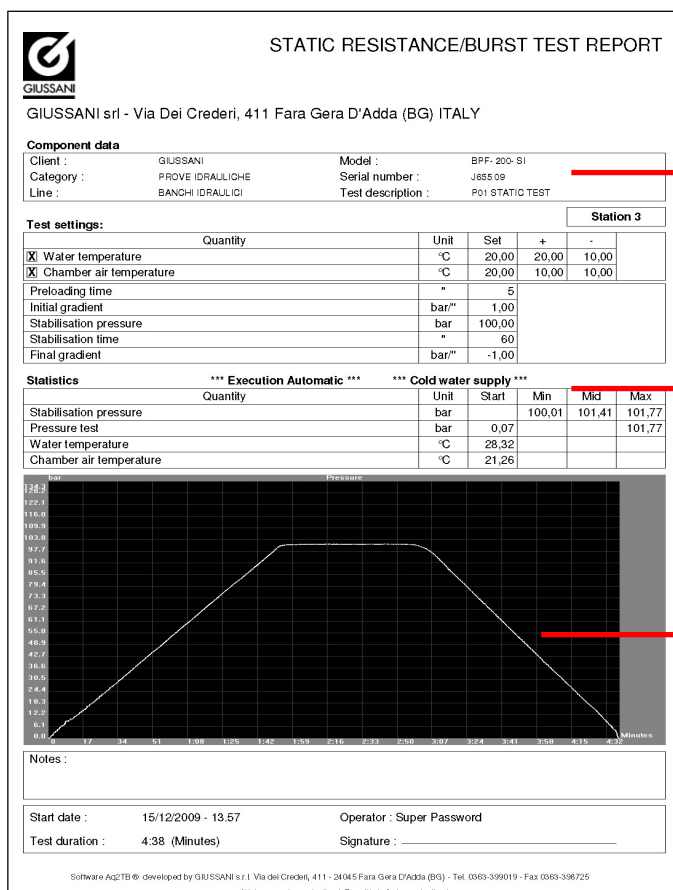

The screenshot shows the 'Aq2TB - Prova di tenuta statica/scoppio' software interface. Key fields include:

- Limiti di avvio:** Temperature settings (0.0, 0.0, 0.0 °C).
- Parametri di esecuzione:** Ramp start (5"), Initial gradient (1.00 bar"), Stabilization pressure (50.00 bar ± 2.0 bar), Stabilization time (20"), Final gradient (-1.00 bar"), Duration (140").
- Limiti di interruzione:** Max pressure increment (< 0.5 bar / 5").
- Unità (E.):** Capacity (450.1 GB), Used space (0.1 GB), Available space (450.0 GB).
- Pressioni:** Hot pump (0.03 bar), Cold pump (0.04 bar).
- Moltiplicatore:** Multiplier (0.00 bar).
- Azionamenti ST2:** Checkboxes for 'Apri calda', 'Apri fredda', 'Alimentazione acqua calda', 'Alimentazione acqua fredda', 'Apri alta pressione', 'Scarico pressione residua'.
- Esecuzione:** 'Automatica' or 'Manuale' selection, 'START' button, and 'Reset allarmi' button.
